

# Spectra Custom Blends™

---

**Spectra Custom Blends™** are specifically designed for your application.

Because the same material doesn't always produce the same color when used at different plants, colors should be specifically formulated for each situation.

With our raw material availability, technical expertise, and blending capability we can provide you with a high value add product.

Consistent color, controlled repeatability, and the addition of application expertise will add new products to your portfolio.

We can produce **Spectra Custom Blends™** for sand mixes, engobes, and body colors designed to fit any individual plant.

*Let us custom design a product  
to fit your specific needs.*
